Summary

DevOps Architect with 20+ years of software development, QA, and enterprise IT experience. Currently owning a custom build system at Intel that tracks and builds thousands of Debian packages and produces hundreds of OS images daily for next-generation silicon verification, serving engineering teams worldwide. Applying deep technical expertise and architectural judgment to design scalable infrastructure, drive modernization initiatives, and leverage emerging technologies like AI/LLMs to improve operational efficiency.

Skills

- C#, Python, JavaScript, PHP SQL, MongoDB, Neo4J
- Ansible, Docker, Kubernetes, GitHub Actions, ECK
- Windows, Linux (Debian)
- Git, Proxmox, MS Visio, WSL, GPG Encryption, Shell Scripting
- HTML5, CSS3, JavaScript, React, ASP.NET Core
- SW Engineering, System Design, Planning
- PMP, Product Owner, Scrum, QA, DevOps, Reqs. mgmt.
- Jira, GitHub Issues, MS Project, PowerBI

Experience

DevOps Architect

Intel — Jun 2025 – Present

- Own and evolve a custom build system that tracks and builds thousands of Debian packages and produces hundreds of OS images daily, serving engineering teams worldwide doing OS verification for next-generation Intel silicon.
- Automated SSL certificate management across build servers and sites, eliminating manual quarterly renewals and preparing for industry-mandated shorter certificate lifespans (47-day maximum by 2029).
- Implemented automated build flows producing squashfs versions of existing OS images, enabling shift-left usage on virtual hardware platforms.
- Leading the replacement of the legacy PHP/MariaDB frontend with a React frontend and ASP.NET Core (C#) backend, extending an existing read-only REST API with authentication, authorization, and write endpoints (in progress).

Education

MBA in Business Analytics

Universidad Autónoma de Guadalajara — 2022–2024

M.Sc. in Computer Science

Universidad Autónoma de Guadalajara — 2013–2015

B.Sc.(Ed) in Math Education

Universidad de Colima — 2000–2005

B.Sc. in Computer Systems

Instituto Tecnológico de Colima — 1998–2003

Certifications

PMP® ([1993982](#))

Project Management Institute — 2015

Professional Scrum Product Owner –PSPO I ([624299](#))

Scrum.org — 2021

IT Project Management ([53175883](#))

Tecnológico de Monterrey — 2022

Music (Expert playlist maker 😊)

- Building an agentic support and infrastructure monitoring solution using RAG with an on-prem LLM to speed up user support, leverage the team knowledge base, and reduce manual infrastructure inspection (in progress).
-

SW Engineering Manager

Intel — Aug 2021 – May 2025

- Formed and lead a distributed team across the US, MX, MY and IL, responsible for Software Development, DevOps/QA, and User Support.
 - Implemented DevOps and QA practices for a custom Debian distro used in Silicon verification, increasing operational efficiencies and preventing bug escapes to users.
 - Designed and implemented CI workflows using GitHub Actions, improving code quality and reducing user issues.
 - Rolled out and managed Scrum process for the team. Deployed JIRA project, created plans, backlogs, milestones allowing predictability and cadence for bi-weekly, quarterly and yearly deliverables.
 - Worked on renewal and funding of virtualization infrastructure for CI and Development work. This enabled the whole department to work on a modern and stable development platform. Established processes and management policies for capital hardware purchases within the team, enabling predictability.
 - Defined standardized test frameworks (pytest) and consolidated testing practices at department level for seamless, efficient integration with CI environment.
 - Established configuration management practices with Ansible for CI hardware configuration, along with designing and releasing a reporting solution using Elasticsearch and Kibana to monitor the health of CI infrastructure, for an efficient single point of reference about the status of runners, test workflows, etc.
 - Introduced AI-driven documentation and code review tools to boost efficiency for a C/C++ codebase.
 - Lead the migration of 200+ repos from GitLab to GitHub and defined repo management policies at organization level, to simplify the operation and management of a C/C++ codebase.
 - Automated user documentation generation with GitHub workflows and containerized hosting (with Docker and Kubernetes) ensuring users always have the latest updates for a large C/C++ codebase.
 - Created a User Support team to improve communication and service for global internal users of a custom Debian distro. Defined processes, SLAs, and dashboards for effective communication and service management.
 - Defined data collection and reporting infrastructure for indicators implemented in PowerBi, allowing the organization to monitor tool performance and user satisfaction.
 - Established and led a site-wide initiative, including volunteer coaching, to standardize and improve software development practices.
-

Product Owner

Intel — Aug 2015 – Jul 2021

- Lead a multidisciplinary scrum team delivering web applications for Finance, Service Desk, and Learning, serving over 10,000 global users.
 - Finance: Budget management for Capital/BTI at division level. Implemented as MVC application built with ASP.Net and Angular, SQL and interfacing with systems like SAP/Ariba.
 - Service Desk: In-house application used at division level to manage incidents related to Silicon verification activities. Implemented as React front-end built on top of REST API with proprietary backend.
 - Learning: Division-level core training application for engineers performing Silicon verification. Developed as MVC application built with ASP.Net built on top of SharePoint.
- Lead and manage product strategy, roadmaps, stakeholder communication, and KPIs.
- Managed project lifecycle, including end-of-life and resource allocation aligned with organizational goals.
- Established and implemented a Product Life Cycle for an Eclipse-plugin app used in next-gen Silicon verification.
- Lead and manage backlog, feature delivery, and Scrum processes for a multi-location development team.
- Managed stakeholders, provided training, documented new requirements, and authored technical specifications.

Software Engineer

Intel — Feb 2011 – Jul 2015

- Developed key features for an Eclipse-plugin application utilized in the verification of next-generation Silicon products, which was integral to the timely market release of these products.
- Implemented a streamlined scrum process to manage a tightly scheduled backlog and provided comprehensive support to global users through an in-house service desk system.

Software Engineer

IBM — Nov 2007 – Feb 2011

- Developed and supported legacy AS/400 communication modules and mainframe network protocols written in C, resolving issues for Fortune 500 clients.
- Developed and maintained desktop applications in C++ and C#/XML with MVC architecture.

Software Engineer

Coca-Cola — Mar 2004 – Nov 2007

- Developed and maintained ERP modules using Visual Basic, SQL Server, C#, and .NET in a Scrum environment.
 - Implemented handheld application with C to collect inventory data and IR data dump.
 - Created reports with SQL Server Reporting Services and provided user support and training.
-
